

LILYDALE
INSTANT LAWN

Autumn/Winter Installation Instructions

We advise against laying Sir Walter Buffalo during the Autumn / Winter period, in wet, shaded or in traffic areas

If you have chosen to lay a Sir Walter during the Autumn/Winter period please ensure that you do the following:

It is strongly recommended that you purchase our Low Water Establishment Pack, together these products will enhance root growth throughout the winter period.

1. Spread Sir Launcher (starter fertilizer and water crystals) and Organic Water Saver over the area to be turfed.
2. Lay the turf as per instructions
3. Apply sand at half a cubic metre per hundred square metres ensuring that there is always leaf showing.
4. Wash sand through thoroughly after laying turf.
5. Apply seasol at a rate of **120ml to 9 litres of water** (average watering can size) for every 10 metres of turf.

MAINTENANCE

- Monitor moisture to ensure that the turf does not get too wet or dry out at any stage.
- Mow only on highest level if needed prior to Spring. Only take a maximum of one third off the leaf each time you mow.
- Remove any leaves from the lawn as they fall.
- Minimise traffic—These lawns will not cope with wear while dormant.
- We take all care but **No Responsibility** for turf laid during the Winter dormancy period.

**It is a good idea to repeat seasol application every month
This can be purchased from Lilydale Instant Lawn**
