

LILYDALE
INSTANT LAWN

Autumn/Winter Installation Instructions

We advise against laying any summer grasses during the Autumn / Winter period, in wet, shaded or trafficked areas

If you have chosen to lay a summer grass during the Autumn/Winter period please ensure that you do the following:

1. Spread Organic Water Saver (moisture +) over the area to be turfed.
2. Apply sand at half a cubic metre per hundred square metres ensuring that there is always leaf showing.
3. Apply seasol at a rate of **120ml to 9 litres of water** (average watering can size) for every 10 metres of turf.
4. Wash sand through thoroughly after laying.

MAINTENANCE

- Monitor moisture to ensure that the turf does not get too wet or dry out at any stage.
- Mow only on highest level if needed prior to Spring. Only take a maximum of one third off the leaf each time you mow.
- Remove any leaves from the lawn as they fall.
- Minimise traffic—These lawns will not cope with wear while dormant.
- We take all care but **No Responsibility** for turf laid during the Winter dormancy period.

**It is a good idea to repeat seasol application every month
This can be purchased from Lilydale Instant Lawn**

We will supply double lawn starter, Organic Water Saver (Moisture +) and Seasol (for orders over 20 mtrs) to help enhance root growth during the Autumn/Winter period.
